

KNUTH GOLF™
Helping Amateurs Play Better Golf.

HIGH HEAT™

Dean Knuth and Steve Trattner started KNUTH GOLF, (High Heat) For the single purpose of developing outstanding high quality golf clubs that are designed from the ground up for the AMATEUR golfer in order to improve their performance and enjoyment of the game.

Since then, we have developed three novel technologies that provide amateur golfers significantly more distance and increased accuracy for more fairways and greens and lower scores. They are unlike any technology offered by the major brands and media and teaching pros have named our driver and metalwoods the “best” clubs amateurs can buy because they perform as advertised. The Triple Trampoline Technology is unique in the industry and provides a great advantage for off center hits. The lower center of gravity is instrumental in getting the ball airborne so it can fly further and the resulting higher MOI. Optimal game changer technology!

257+ HAS THE ONLY FACE TECHNOLOGY THAT TAKES ADVANTAGE OF A 2016 USGA RULE PERMITTING A HOTTER FACE FOR SIGNIFICANTLY MORE DISTANCE AND BETTER SCORING.
