

VELOCORE

POWERING VENTUS SHAFTS

What is VeloCore?

VeloCore technology is a multi-material bias core construction technique that delivers ultimate stability through transition and impact (maximizing clubhead MOI) – increasing velocity and smash factor. The multi-material core is crafted with full-length, ultra-high modulus Pitch 70 Ton Carbon Fiber — 150% stronger and more stable than T1100g — for ultimate stability, and 40 Ton bias layers ensure incredible feel.

Ventus with VeloCore Technology promotes consistent center-face impact and provides ultimate stability, tightening dispersion and increasing control. The result is a shaft that maximizes the MOI and ball speed of your clubhead through the reduction of twist during the swing and at impact, especially on off-center hits.

Only Fujikura Ventus shafts utilize VeloCore technology to deliver ultimate stability through transition and impact.

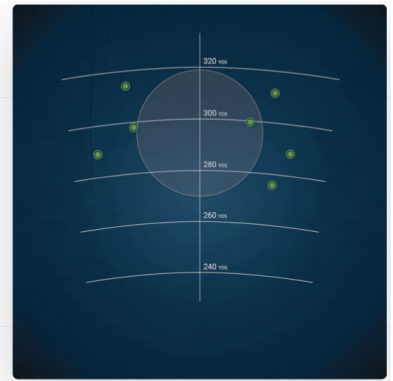

Find the center of the face – and the fairway

A driver's sweet spot is in the center of the face. VeloCore was created to help you find it more often.

Tighten your dispersion

Stop missing it big. VeloCore continues to help golfers at every speed tighten their dispersion through its unique, multi-material bias core construction and ultra-stable and stiff tip section.

Boost your MOI

When you do miss the center, you can count on VeloCore at impact to keep your club head stable and reduce twisting from shots off the toe or heel. That stability preserves ball speeds and maximizes your driver's MOI. Yes, one shaft really can be more forgiving than others – if it has VeloCore.

Do all Ventus shafts have VeloCore Technology?

No, only the aftermarket shafts from Fujikura that have the VeloCore logo near the shaft tip have VeloCore Technology.

“Stock” OEM shafts that come already equipped in a new club do not have VeloCore.
