

The Worlds Only Vacuum- Cured Golf Club Shafts!

BALLISTIC - DESCRIPTION

Filament wound Vacuum Cured Construction technology produces round, pre-loaded concentric and spineless golf shafts for incomparable stability, dynamic response and feedback.

Fitting the widest array of players and swing types. Each shaft profile and flex present a visible, pre-loaded fiber architecture.

Tension tailored for torsional recovery and attenuation of vibration, for the purest kinetic energy transfer from shaft to clubhead.

KINETIXX® loaded Kevlar BALLISTIC series features the world's only continuous fiber filament wound Kevlar construction technology.

Optimizing the extraordinary advanced composite material properties producing shafts with an incredibly high tensile strength-to-weight ratio, 5x stronger than steel, with 20x the elastic strength.

KG70-D is a Mid-Balance, Mid-Kick point advanced composite shaft pre-loaded with a visible fiber structural grid Engineered according to each flex, delivering balanced strength from butt to tip, producing medium-high Ballistic trajectory with exceptional stability and feel.

Features:

- Filament wound Vacuum Cured Construction technology produces round, pre-loaded concentric and spineless shafts for incomparable stability, dynamic response and feedback.
- Tension tailored for torsional recovery and attenuation of vibration, for the purest kinetic energy transfer from shaft to club head.
- Fitting the widest array of players and swing types. Each shaft profile and flex presents visible, pre-loaded fiber architecture.
