AVAILABILITY: 9°, 11° RH

Four years in the making, the 719MW Driver is the ultimate in advanced adjustable driver technology - offering more versatility than any other driver.

Tom Wishon's 40+ years in clubhead design has encompassed over 400 original and innovative golf clubhead models, including more than 50 technology firsts.

The seeds of the latest Wishon model, the 719MW Driver, can be found in Wishon's original woodhead designs in the 1990s - several of these heel-weighted models demonstrated the importance of how much weight was needed to make a visible difference on a golfer's shot.

Most modern OEM adjustable weight drivers have a maximum of 20g moveable weight - this is not enough to move the centre of gravity and create a marked difference for the vast majority of golfers.

The 719MW changes that - with the ability to move 30g around the clubhead, the 719MW's effectiveness in changing the centre of gravity and altering shot shape is clear.

ULTRA-LIGHTWEIGHT CARBON  
COMPOSITE CROWN

Featuring a state-of-the-art weight system incorporating an ultra lightweight carbon composite crown to lighten the head structure and lower overall centre of gravity, the 719MW also incorporates a 2-piece investment cast variable thickness face to maximise ball speed.

Additionally, the 719MW also features a custom hosel allowing even more clubfitting options to ensure your clubfitter can provide the best fit for your swing.

If you want the most effective in advanced driver technology, look no further than Wishon's 719MW.

## + 4 MOVEABLE WEIGHT CAPACITIES

- + Place 20g or 30g to either heel or toe position for draw or fade bias OR
- + Place 20g or 30g to either forward or rear position for higher or lower ball flight OR
- + Split 10g or 20g weights in the toe and heel positions to increase head MOI

/// FADE BIAS

/// HIGHER FLIGHT

/// DRAW BIAS

/// LOWER FLIGHT
